

aokin antibody catalog currently includes monoclonal antibodies against various mycotoxins, hormones, fluorescent dyes and cannabinoids.

In addition, **aokin** can provide development, production and purification of antibodies, including characterization of binding constants, fluorescent labelling and enzyme conjugation. We are specialized both in antibody development against haptens and synthesis of hapten-protein conjugates.

Please contact info@aokin.com for any additional products on request or custom synthesis.

The use of these products is limited to trained personnel for professional manufacturing, laboratory, or research purposes. Final Fitness-For-Use must be determined by and is the sole responsibility of the end-user.
